

Dr. Whitworth works in the USDA-Agricultural Research Service as a plant pathologist. His current research involves managing *Potato virus Y* through cultural practices and through the development of PVY resistant varieties in the potato breeding program at Aberdeen, Idaho. He conducts the many screening trails for potato diseases typically required in a breeding program to understand and develop resistance. His early work experience was in seed potato certification managing programs in Colorado and Idaho. His work with ARS began in 2003 where he has benefited from working with many different researchers in the Tri-State Potato Variety Development Program and many of the seed growers he met during his 10 years in seed certification. He served as a Senior Editor for the American Journal of Potato Research for the last nine years. He currently is serving as the President of the Potato Association of America
