

THE POTATO MINUTE

May/June 2026

EXECUTIVE DIRECTOR - Terence Hochstein

In This Issue:

- 1 Executive Director's Report
- 2 Seed/ Gov't-Policy Report
- 3 Ag Relations Report
- 4 From Our Corp Sponsor
- 5 Provincial News
- 6 Across the Country
- 7-12 From The Office

Every year, spring plays out differently when it comes to weather and planting of the crop. April and early May were extremely cold with many nights in May dropping well below freezing. The cold temperatures and continuous snow in the north delayed the shipping of seed for our seed growers. The crop that went in early here in the south had to endure a couple of nights

of double digit freezing. It wasn't until a couple of weeks ago that growers weren't nervous about having lost those first acres planted.

Once it warmed up, the crop went in relatively quickly without any major delays. Most growers can plant their crop in 10 days if the weather cooperates. With very little snowfall this winter the south was extremely dry during planting and growers were having to water their crop up as soon as the irrigation was turned on in early May. Ten days ago, the majority of the province was blessed with some timely rains ranging from 3-8 inches. The ground took every last drop with very little drown out acres across the growing areas. These timely rains have given everyone a sense of optimism, once again. Some have felt that the crop is behind schedule, but if you look at the long term average the crop is right where it needs to be for this time of year. A few days of sunshine and no wind and everything will be right on track. The crop that has emerged looks healthy and, for the most part, plant stands are good to excellent.

We are still awaiting a number of grower's planting records but it looks like we will be at least the same as last year with our acres, if not slightly up over CY25. Volume in the fresh, chip and processing areas continue to rise even though the overall sentiment across North America is that sales are somewhat soft at this time.

All eye's continue to look toward two events that will have a major impact on the future of our industry. Our industry is unable to have any direct influence on either one but the outcomes will affect how we all do business. First off, is the unrest and war in the Middle East. The affects that this is having on the global economy and the input supplies for food produced around the world will take years to get sorted out. One thing is for sure, it will never be the same. The second event is the upcoming discussions around CUSMA and what

that trade agreement will look like going forward. Amongst other things, agriculture and food production is so intertwined in North America that a person doesn't know where to start and stop. All three countries rely so heavily upon each other to feed their populations that it will be a catastrophic mistake to change the way we trade with the US and Mexico. The lack of understanding and sheer ignorance at the bureaucratic level in all countries is embarrassing when it comes to food production.

One a happier note close to home, the PGA is excited to welcome Ms. Sonia Third to our PGA Team. Sonia will be joining us June 15th as our new Communications Director. She will be transitioning into the role as Deb Brewin moves into a part time position as Promotions and Education Director. This will allow for a smooth transition into what will eventually be Deb's retirement from the PGA. Sonia comes to us with many years of creative communications experience in the agricultural world having worked with a couple of local agricultural business'. We look forward to having Sonia join us.

Coming up on July 8th is the APIA's annual Burgers and Beans at the Taber Legion Park. This is open to all PGA members and their families. Come enjoy an evening with your colleagues and bring the kids , as the APIA has a special evening planned for them this year. The following day, July 9th the annual PGA/APIA golf tournament will be held at the Taber Golf Course. The event is full, but you can still contact Juanita at the office to get on the cancellation list. We always have folks drop out at the last minute so there still may be an opportunity to join us for a day of golf and laughs. See page 11 for more details.

Planning continues on our 60th anniversary with the PGA Conference and Tradeshow November 23-25th in Red Deer coming up. More details to follow in the coming months.

SEED DIRECTOR/GOV'T RELATIONS & POLICY - Stacey Bajema

Seed Update: Planting Complete Across Alberta

Seed potato planting is now complete across Alberta, marking the beginning of another growing season for the province's seed sector.

This spring presented varying conditions across the province. Cool, wet weather persisted throughout much of the planting season, with significant regional differences in planting progress. Growers in southern Alberta were generally able to get into the field earlier, while areas closer to Edmonton experienced late-season snowfall and prolonged cold temperatures that delayed planting activities.

Despite these challenges, planting was completed successfully, and recent weather conditions have been encouraging. Timely rainfall across many potato growing regions has helped support crop emergence and early development. As always, weather throughout the growing season will play a key role in determining overall crop quality and yield potential.

At this time, Alberta's seed potato acreage and production are expected to remain relatively flat compared to previous years. While market conditions continue to evolve, Alberta seed growers remain focused on producing high-quality seed to meet the needs of domestic and export customers. As the crop progresses through the summer months, the Potato Growers of Alberta will continue to monitor growing conditions, market developments, and plant health issues affecting the seed sector. We look forward to a productive growing season and a successful harvest this fall.

Plant Breeders' Rights Modernization

The Potato Growers of Alberta welcomed the Government of Canada's recent amendments to the Plant Breeders' Rights (PBR) framework, which extend protection for potato varieties from 20 to 25 years.

Developing new potato varieties requires significant investment and can take more than a decade before seed becomes commercially available. Extending PBR protection helps encourage continued investment in plant breeding and supports the development of innovative varieties that improve productivity, disease resistance, and market opportunities for growers.

These changes align with PGA's ongoing advocacy for regulatory modernization that strengthens Canada's seed system while reducing barriers to innovation and improving competitiveness. As a leading seed potato producing province, Alberta benefits from policies that encourage investment in variety development and support a strong, competitive seed sector.

Stacey Bajema

AG RELATIONS DIRECTOR - Ashley Wagenaar

Looking Ahead: Investing in Tomorrow's Potato Research

In research, we're always working at least a year ahead of where we are today. Right now, research teams across the potato sector are preparing and submitting funding applications for projects that will begin next year, building on current findings to address the next set of industry challenges.

To help guide that work, the Alberta Potato Investment Fund and the PGA Grower Committee update their research priorities every year. These priorities are designed to reflect the most pressing needs of the industry and ensure applicants have clear, relevant direction when developing proposals. Projects must demonstrate tangible value to Alberta growers, whether that's improving yield, quality, and storability, reducing risk, or supporting better on-farm decision-making.

Priority areas also include soil health and resilient production systems, input and resource use efficiency, integrated pest and disease management, and storage and post-harvest quality. Together, they help ensure that new research investments stay aligned with real-world challenges across seed, fresh, and processing potato production.

As those new proposals take shape, it's worth taking a moment to look at the progress being made through ongoing work. One example is a project out of the Lethbridge Polytechnic; Studying Structural and Compositional Changes in Stored Potatoes during pre and post dormancy break using Synchrotron Sourced Imaging; which is exploring how potato tubers change during storage as they move through dormancy and toward sprouting.

This project focuses on understanding the structural and compositional changes that occur in seed potatoes before and after dormancy break. Researchers are using an integrated set of advanced tools, including hyperspectral imaging, ATR-FTIR spectroscopy, and synchrotron-based imaging at the Canadian Light Source, to examine both the internal structure of potatoes and the biochemical changes taking place during storage.

The goal is to better understand how starch, sugars, proteins, and hormones shift over time, influencing sprouting behaviour and overall tuber quality. By combining imaging and biochemical analysis, the research aims to connect what's happening inside the tuber with measurable indicators that could eventually support improved storage

management decisions.

Progress to date has been strong. Experimental work is underway using certified seed potato cultivars stored under controlled conditions, with regular sampling to track dormancy progression.

Data collection from hyperspectral imaging and synchrotron-based techniques has been largely completed, and analysis is ongoing.

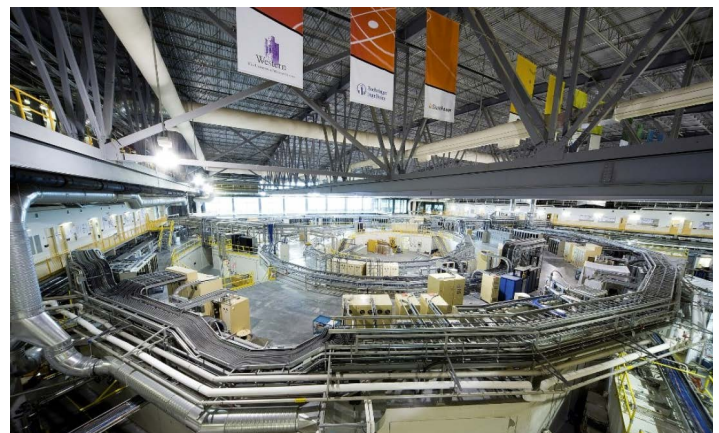

"These priorities are designed to reflect the most pressing needs of the industry"

Ultimately, this work is expected to give growers and industry better tools to monitor potato quality, reduce storage losses, and make more informed decisions throughout the storage season.

As we look ahead to the next round of research funding, projects like this highlight the importance of continued investment. The work being proposed now will build directly on these findings and help ensure the sector is equipped with the knowledge and tools it needs for the future.

It takes a giant machine to study the smallest of molecules. A synchrotron produces different kinds of light in order to study the structural and chemical properties of materials at the molecular level.

Tips, trends, and tech to power your next decade of growth

The world is constantly changing. For Alberta's agricultural producers, it's as important to have short-term business plans that help to navigate these risks as to have long-term plans that keep an operation running for generations to come.

The ATB Agriculture Team experts provide the following tips that will be key for farmers for the next 10 years.

Keep pace with technology

Increased access to high-speed internet has proven incredibly valuable to farmers. Where accessible, it can capture substantial data from sensors and equipment that can be centralized by a farm management platform to further productivity and profitability.

"For example, on-farm weather stations can support predictive models for crop or ranch operation, decision support, and planning decisions for the next year," notes Jon Neutens, Vice President and Head of Agriculture at ATB.

"Equipment today collects vast amounts of data throughout the growing season," adds Robert Jensen, Director of ATB's cropping segment. "Having the ability to organize and interpret the story the data is telling about the crop helps you make informed decisions now and for future crop seasons."

Keep your business plan up to date

Preparing for the future of a farm includes maintaining a flexible business plan. ATB's relationship managers bring you industry expertise that can help adapt business plans to every stage of your operation.

"ATB's dedicated agriculture team aligns our customers with an advisor who is able to actively participate in the planning process, and also provide feedback at critical checkpoints within the time frame of the plan," says Jensen. "Each of our advisors has access to tools and expertise in agriculture

Learn new ways to power your next decade of crop growth.

finance. This support network brings first-hand experience with successful farming operations across the province."

"Sustainable business plans aim to evolve an agricultural operation beyond the aspirations of current owners, and anticipate the needs of future generations," adds Neutens.

"A good plan should not just take the next growing season into account, but also your longer-term objectives—which should include succession," he says. "This way, you will make more strategic decisions about many aspects of your operation, including land management and technology adoption, just to name a couple of key areas."

ATB can help you develop a forward-looking financial plan to reach those multigenerational goals, in addition to realizing near-term opportunities and mitigating risk.

Expert advice at every stage of growth

Staying current with trends and innovation is important to ATB, because it's critical to our agribusiness customers in an increasingly complex industry. Whether you are just getting started, expanding locally, crossing borders, or considering an exit, your ATB relationship manager's expert advice, financial services and strategic insights can help your agribusinesses through the next decade.

"Our agriculture team strives to stay current with technological advances in all areas of agriculture, whether it be equipment, strategies, practices, or even crop development. Because when our customers come to us to discuss what direction they need to take, we want to be right there with them, knowledge-wise, and offer relevant advice to help their farm succeed." says Jensen.

Provincial News

Congratulations & Welcome Honourable Tara Sawyer, Minister of Agriculture & Irrigation

The Potato Growers of Alberta would like to extend congratulations to the Honourable Tara Sawyer, the newly appointed Agriculture & Irrigation Minister. We look forward to working with you and your team. Also, we're grateful to the outgoing, R.J Sigurdson for his support and dedication to our industry during his tenure, and wish him well in his new position as Minister of Affordability and Utilities.

Potato Growers of Alberta Attends Western Premier's Conference

PGA Board Chair Alison Davie attended the Western Premiers Conference in Kananaskis on May 25. It was an opportunity to share highlights of our industry with policy makers. Premiers from all the Western provinces were in attendance, as well as many Alberta government ministers and representatives from other industries.

L-R: Honourable Tara Sawyer poses with PGA Chair, Alison Davie, Alberta's Premier Danielle Smith poses with several western provincial premiers during the Western Premier's Conference

New PGA Highway Signage Going Up

Potato Growers, across the province will be installing Large 4 x 8 in fields along busy highways, as part of the PGA's public awareness initiative. Signs include short facts about the Alberta Potato Industry. Watch for several going up along busy Alberta highways.

Across The Country

Congratulations To Two Of Our Local Potato Producers On Their Regional Alberta/NWT Nomination

Program Overview

Canada's Outstanding Young Farmers Program recognizes young farmers who exemplify excellence in their profession. Eligible nominees must be farm operators between 18 and 39 who derive a minimum of two-thirds of their income from their farm operations. Each year one farming couple is selected from each of the program's seven Regional Recognition Events to represent their respective region at the National Recognition Event. At the National Event, the seven honourees are recognized for their achievements and judged by a distinguished panel of judges using the following criteria:

- Progress made during their farming career
- Maximum use of soil, water and energy conservation practices
- Crop and livestock production history
- Financial and management practices
- Contributions to the well-being of the community, province and nation

Each year, two of the seven honourees are chosen by the judges as Canada's Outstanding Young Farmers.

James Johnson Johnson Fresh Farms

The 2026 COYF Alberta/NWT Regional Event is heading to Kirriemuir, AB on June 17–18, where we'll celebrate four incredible farming operations shaping the future of Canadian agriculture.

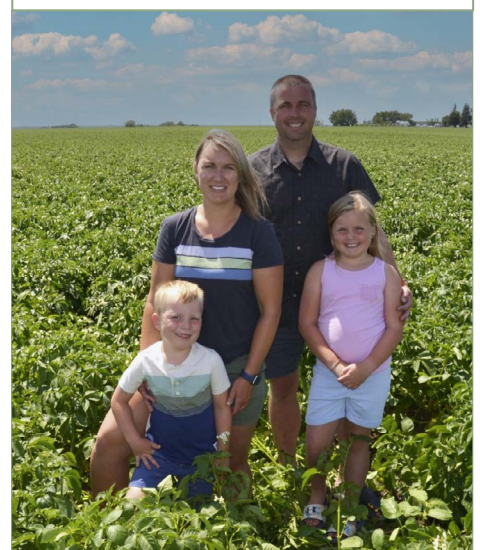

From regenerative ranching and specialty crops to irrigated produce, seed production, and innovative livestock genetics, this year's nominees showcase the passion, leadership, and innovation found across Alberta agriculture.

One of these outstanding nominees will go on to represent the Alberta/NWT region at the 2026 National Event this November in Vancouver, BC!

Read all the full bios at <https://oyfcanada.com/language/en/regions/alberta/>

Alison & Micheal Davie North Paddock Farms Ltd.

The judging criteria of Outstanding Young Farmers will be:

- Progress in Agriculture Career
- Production & Management
- Financial Progress
- Sustainability & Environmental Benchmarking
- Safety, Education & Marketing
- Contribution to Community, Province & Country
- Oral Presentations
- Interviews

Good luck to both families!!

COMMUNITY EVENTS

Lethbridge Polytechnic Gala Dinner - April 17

Deb from the PGA staff and her husband Brian attend the Lethbridge Polytechnic Local Producers Gala Dinner where producers, agri-food businesses and consumers come together and treated to a culinary experience prepared by the students, showcasing local and gri-food products. An added treat was the Spudnut bar that was a hit along with all the other dishes locally sourced. Everyone in attendance was seated with farmers, agri-food business owners, organizations and consumers, which prompted good conversations around the table

Delbert Vossebelt from Chin Coulee Spud Farms (top right) provides the potatoes for PGA's annual Spud Giveaway in celebration of International Day of the Potato. All the staff were on hand to fill bags and boxes for community members. This global event brings awareness to food security, nutrition and livelihood of growers.

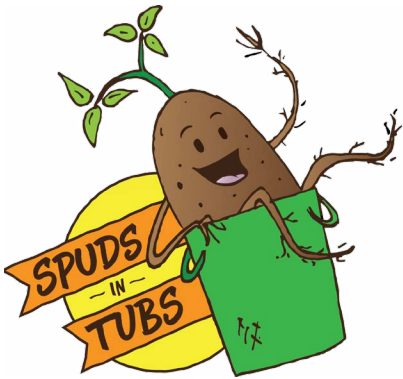

McHappy Day May 6

PGA Executive Director Terence Hochstein helps out at the drive-through window during McHappy Days. This event supports not only Ronald McDonald Houses across the country but locally as well. Proceeds of the sales also went to the Taber & District Hospital Foundation. Pictured above includes Aline Holmen, Director of Fundraising for the foundation.

International Day of The Potato - May 27

Spuds In Tubs 2026 Wrapping Up

2026 Spuds In Tubs Program will wind up this month, with students and teachers across the province harvesting their potato plants before school is out for summer

Classes planted in February and have nurtured these plants for several months. They've collected data and done their own research on the plants, while keeping in line with Alberta curriculum, such as plant science, math, environmental and community impact, health and many more.

For the second year in a row, classes participated in *virtual* farmer mentor sessions with "Farmer Ryan". He met with the groups three times during the program to discuss what was happening on his potato farm. Ryan was able to take the kids with him while planting in the field on the equipment and gave them a real life perspective of how things are done on the farm. During the last session, he was hoping to get into the field to show plant emergence and irrigation, but the heavy rains prevented that plan so he met up with seed grower Matt Visser, from Norbest Farms. Matt's farm provided the seed potatoes for the project and he talked about what goes on at his seed potato operation, located north of Edmonton.

A ton of really good questions were asked and everyone now has a better understanding of how potatoes are grown. A huge thank you to Ryan Jensen for sharing all of his knowledge with the classes involved.

We look forward to Spuds In Tubs 2027!

Photos Below: Students from Children of St. Martha School and Father Leonard Van Tighem in Lethbridge both enjoy their harvest

Top: Farmer Ryan speaking to students about how potatoes go in the ground using the potato planter Bottom L-R: Matt Visser from Norbest Farms and Ryan Jensen talk about the seed potato farm that provided the seed for the program

PGA GROWER PROFILE

Perry Family Farm

Family Composition: 3rd Generation - Gerald & Beerta, 4th Generation - Chris & Harold, 5th Generation on Deck

Location: Chin, MD of Taber, Lethbridge County

Crops Produced: Potatoes (Lays Chips & McCain Regen Fries, Mozart-Spudday), Grain, Dry Peas, Seed Canola, Beans, Biogas & Digestate + Regen Ag

Q1. How did you get involved in potato farming? How long have you been growing spuds?

Huge kudos to the generations before us for seeding the opportunity! The Perry Family were the 7th settlers in the Chin area in 1909. Great Grandpa broke land and established the land. Father Gerald started the spuds with Knud Petersen back in 1968. Harold always knew he wanted to be a farmer, pursued an ag diploma at Lethbridge College, and graduated ready to go. Chris had zero intentions of farming leaving high school. After three years of engineering school, he realized living in the concrete of Calgary, he had more of a passion for the land and farming than originally thought. Chris finished an ag degree studying spuds at Washington State University with Dr. Bob Thorton.

Today, Perry Family Farm farms approximately 6,000 irrigated acres and grows 1600 acres of spuds, 30,000 tons of potato storage.

We have been growing for Frito Lay for 46 years and McCains for 26 years. Other customers include(d): Shearer's, York Farms, Maple Leaf, Old Dutch, Lamb Weston.

The farm continues to evolve through regenerative agriculture, renewable energy, and data-driven farming

We are also owners/partners with 2 Feedlot operators, Kasko Cattle and KCL Cattle in the formation of our new Sunnyside Farms Ltd Managed by Brody Curtis just north of Coaldale, proudly supplying spuds to McCain.

Q2. What do you love about potato farming?

We love people. Our farm family crew, our fellow growers and PGA Staff – and we especially love our customers that love chips as much as we do, and that we make a product that's irresistible. There are so many people we meet on our travels who are so excited to learn that we're potato farmers, because everyone loves potatoes!

Q3. What other activities are you involved in (outside the farm or association work)?

Outside of farming, our family is actively involved in the local community.

Chris is the founder of the Panthers Volleyball Club, a girls' volleyball program that has been operating since 2013 and currently runs three teams each season. Harold has helped coach Basketball in Coaldale. We've all spent many weekends in gyms cheering on our kids as they compete in volleyball or basketball.

Jill Perry has participated in the Tour Alberta Cancer Ride for the Cure on Team Leah since 2019 and has gotten Harold, Chris, Kyra, Chloe, and Elise to join as well! As a family, we enjoy spending time outdoors, including boating in the summer and skiing at Castle Mountain in the winter.

Kyra is on the Link Pathway Board building bike paths for community linking Coaldale and Lethbridge, and hopefully one day Taber to Lethbridge.

We believe in Community and do our best to support events as we can.

Q4. What types of on-farm sustainability practices do you employ?

Sustainability has always been important on our farm. We use a variety of regenerative agriculture practices: Flower strips and bird sanctuaries, multispecies cover cropping, compost and rotational grazing. Harold's passion for soil health and regenerative agriculture continues to drive many of the sustainability practices used on the farm today. In 2011, the Farm took home McCain's Environmental Award. In 2022, we won PepsiCo's inaugural PEP+ award for our sustainable practices.

In 2014, we built our on-farm organic waste to energy biogas

FROM THE OFFICE

facility GrowTEC. GrowTEC provides enough energy to run the farm twice-over while providing over 20,000MT of nutrient rich, pathogen free digestate that goes back to the land. GrowTEC now upgrades biogas into renewable natural gas (RNG). Interconnected to two utility grids is a feat the farm is proud of adding resilience as a decentralized energy producer and consumer.

Q5. How do you contribute to tell “your story” of agriculture to the public?

We do a community “Spudday” every year, where we welcome the community to come pick their own potatoes, and chat with real life farmers. This has been running since 2015 and really helps foster our potato industry relationship with the community.

Harold is a 2006 Nuffield Scholar. He did a global tour and an individual study topic: “Healthier Soils for Healthier Crops for a Healthier Population”. He has since done numerous presentations and continues to be an active host for Nuffield Scholars from around the world. Harold is also dedicating time to be a regen ag advisor for McCain.

In 2015, Chris was invited by PepsiCo to speak at a business side event at COP 21 in Paris around sustainability and data driven agriculture (DDA) supported by PepsiCo helps maximize our resources to produce food for the world.

In 2025 the Farm was recognized as PepsiCo's Global Farmer of the Year. PepsiCo contracts ingredients from over 300,000 farms across 60 countries – It was an incredible honour to be recognized for our contributions in quality, sustainability, innovation and community on the heels of winning the Lays Grower of the year for North America in 2023 and 2024.

Following this Chris was invited to present in Davos at the World Economic Forum on behalf of PepsiCo in January 2026. Sharing Farmers Perspective on food production and

global systems at one of the biggest stages in the world. For Chris' Full Story “From Healthy Soils to Human Systems” About this journey [click here.](#)

Additionally, you may recognize the family from Lays' “Betcha the Farm” advertisement, promoting Canadian grown potatoes.

Chris is Chairman of the Canadian Biogas Association, advocating to value add the ag sector, integrating agriculture with energy and circular economy. Presentations abound, Chris shares the story to engage with customers for the agriculture community sharing one of the many good stories of Farmers!

Q6. What is the best farming advice you've been given?

“You're not inheriting land from your ancestors; you're borrowing it from your children”

Q7. What are your concerns for the future of farming?

Farmers are being asked to produce more food, with fewer resources, while managing increasing climate, financial, labour, and regulatory pressures. We also need to ensure that as agriculture becomes more digital and data-driven, farmers remain trusted partners and beneficiaries of the value that data creates.

Q8. What excites you about the future of farming?

Our children, the 5th generation of Perry Family Farm are starting to come back and contribute and work with us on the farm. The next generation is bringing expertise in sustainability, science, technology, artificial intelligence and business, and we are excited to see how they combine those skills with more than a century of farming experience. We can't wait to see what they do and how they improve this place – GO Upgrades!

FROM THE OFFICE

This year marks the PGA's 60th Anniversary!

July 9th, 2026

As we celebrate throughout the year, we want to add another element of fun to our golf tournament. We encourage you to dress for the 1960's era; sweaters, pleated pants, railcar hats and bonnets, poodle skirts, plus many other crazy colorful prints and accesories. Prizes will be awarded for best dressed male, female and team, so get creative and start collecting your wardrobe.

MAIN TOURNAMENT SPONSORSHIP

Handled by the PGA. Inquiries can be sent to Juanita at the office juanita@albertapotatoes.ca.

MEMBERSHIP

The Alberta Potato Industry Association is composed of individuals from various areas of business, all of whom work with, and alongside, the potato growers in Alberta. Formed in 1990, the APIA facilitates in the networking with growers at events such as the Burgers N Beans, the Alberta Potato Conference Trade Show, and the Annual PGA Golf Tournament. We are very excited to be celebrating 35 years of partnership with the growers this year!

If you are interested in becoming a member, please send an email to apiamemberships@gmail.com. Memberships will be sent out at the end of the year to last years' members, as well as those interested this year.

LIFETIME MEMBERSHIP RECIPIENTS

The following individuals are recognized for their long-standing contribution to the APIA and have been awarded a Lifetime Membership to our association:

- | | | | |
